First remove the stock or stock attachment cover from the

DAM by loosening the set screw with a 3/32" Allen wrench

and sliding the part off of the gun.

wrench.

•With a 5/32" Allen Wrench loosen the Front Angle Grip from the shroud and move it ~1 inch forward or remove

 Remove DTM or Toolkit Magazine from the DAM's Magazine Well. entirely.

•Insert Box Rotor into the magazine well with the DT Logo facing forward. Ensure Box Rotor is fully engages the magazine catch.

 Switch the On-the-Fly system forward to magazine fed operation.

WARNING: Once activated the Box Rotor will feed paintballs

and the DAM will fire a paintball upon the next trigger pull.

• Press the power button on the left side of the Box Rotor to activate it.

•Gas up and power up the DAM to begin normal operation. WARNING: The DAM will fire a paintball upon the next trigger pull.

Charging and Installing the Battery•Remove the Tray from the Box Rotor by pushing down on the Release Tab on the right side of the Box Rotor and

pulling the tray all the way out.

Open the Tray Lid by pushing in on both of the Lid Tabs found on the front and back of the tray. Then pull

upwards to rotate the Lid free of the Tray.
•Remove the Gear Box with the Battery. Insert the

Insert the wall plug into the Charger and plug into the rechargeable Battery Plug into the Battery Charger.

•Reinstall the Gear Box. Ensure that the gears are wall. A full charge takes up to 9 hours.

correctly seated. Insert the Battery Plug into its socket

place and reinsert the assembled Tray into the Box rotor. The Tray can only fit into the Box Rotor one way. Reinstall the Lid ensuring that both tabs are locked into

Synchronizing the Box Rotor and the DAM

Remove Tray and open Tray Lid to access the Gear Box.

•Remove Gear Box and locate the red Sync Button.
•Press the Power and the Fire Select P Buttons simultaneously. All three blue Fire Select LEDs will flash.
•Press the red Sync button on the Box Rotor's Gear Box

before the LEDs finish flashing. The button is located bellow the Battery Plug. Fire Select LEDs will stop flashing immediately after

successful synchronization.

•Troubleshooting: If the box loader is NOT synchronized to a DAM, a red LED will flash on the Gear Box. Low

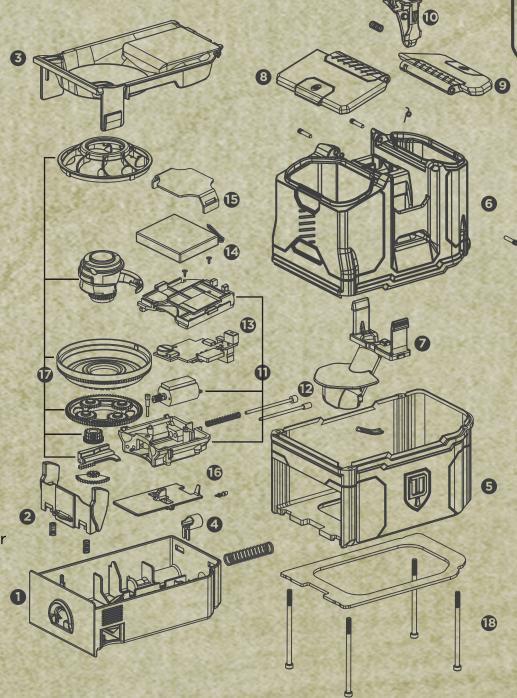

circuit board, but only one at a time. This ensures that there is no cross communication between separate platforms. NOTE: The Box Rotor can be synchronized to any DAM

synchronization to fail.

Features:

The Dye Box Rotor™ is the latest innovation in paintball loader technology fusing vertical magazine feed with tournament quality rates and reliability. Starting from the number one choice in loader technology among top level player's worldwide, the Box Rotor $^{\mathrm{IM}}$ is built with all of the same simplicity and durability of the Rotor $^{\mathrm{IM}}$ and adds game changing new features specially crafted for the ultimate scenario paintball gun, the Dye Assault Matrix™. The Box Rotor™ and the DAM™ combine to make the ideal platform for any field.

Vertical Feed

- Tournament quality feed rates through the magazine well. •Under gun mounting lowers visible profile without compromising capacity or speed.
 •Utilizes the standard DAM™ magazine well for quick and
- easy transition to and from standard magazines.

- •The highest stock capacity of any loader system.
 •Under gun mounting gives the operator ammo and profile advantage over any other platform today.
- •Turn the indicator LED off during those night or low light

Adjustable Torque

•Fine tune your torque setting to feed extremely brittle paint at high feed rates.

Constant Feed

 The Constant Feed Rate feature ensures a feed rate of over 15 balls per second, far exceeding pro level requirements.

Rapid Reload

- •Two transparent locking lids allow for fast,
- ambidextrous loading and secure closure.
- •325-ball capacity, 60% more than most competing loaders.

Tuff Molding

- ·Built to withstand anything an operator throws at it.
- Water resistant for full functionality even underwater.
 Nothing you'll encounter on a paintball field will penetrate our Tuff Molding and cause your loader to break.

Toolless Maintenance•Tool-less maintenance makes assembly and disassembly a rapid, highly intuitive, and effortless process.

Ammo Retention

The Box Rotor's™ retention clip keeps paint in the gun and the loader and off the ground. Wasting ammo during a mission is not an option.

Jam Release Trigger

A simple squeeze of the Anti-Jam Trigger, located on the underside of the Box Rotor™, releases the jammed paint immediately.

Federal Communications Commission (FCC) Statement

15.21
You are cautioned that changes or modifications not expressly approved by the part responsible for compliance could void the user's authority to operate the equipment.

This equipment has been tested and found to comply with the limits for a purpose of the second secon

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-Reorient or relocate the receiving antenna.

-Increase the separation between the equipment and receiver.

-Connect the equipment into an outlet on a circuit different from that to

- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected. -Consult the dealer or an experienced radio/TV technician for help.

This device complies with Part 15 of the FCC Rules. Operation is subject to

the following two conditions:
1) this device may not cause harmful interference, and
2) this device must accept any interference received, including interference that may cause undesired operation of the device,

NCC Statement 根據NCC低功率電波輻射性電機管理辦法規定:

依據代學·切字電及輻射注電視管理排派及注 第十二條 密型式認證合格之低功率射頻電機,非經許可,公司、商號或使 用者 均不得擅自變更頻率、加大功率或變更原設計之特性及功能。 第十四條 低功率射頻電機之使用不得影響飛航安全及干擾合法通信;經發 現有 干擾現象時,應立即停用,並改善至無干擾時方得繼續使用。前項合 法通信,指依電信法規定作業之無線電通信。 低功率射頻電機須忍受合法 通信或工業、科學及醫療用電波輻射性電 機設備之干擾。
